Research Interests

My major research interests lie in the area of text generation evaluation and large language model (LLM) alignment (using data augmentation, training and inference time approaches). I want to learn metrics that can assess LLM's generation quality (both in the form of quality score or natural language diagnostic report) and align LLM with human principles.

I am the first author of SEScore1&2 and InstructScore (**Best Unsupervised metrics at WMT22 shared task**). Currently, I am actively working on improving training time approach to align LLM with well defined metric, reward or human feedback.

- Used a learned fine-grained feedback model (InstructScore style) to pinpoint defects. Using original LLM (PALM2) as a proposal of edits, **LLMRefine** searches for defect-less text via simulated annealing. LLMRefine improves 1.7 MetricX on translation tasks, 8.1 ROUGE-L on ASQA, 2.2 ROUGE-L on topical summarization [3].
